Smart Wireless Solutions for Today's K-12 Schools

Whether you are a large public K-12 school seeking a comprehensive packaged solution or a smaller facility looking for a detailed solution on a specific budget, Visiplex's portfolio of two-way intercom, public-address, bell, master time synchronization and emergency notification products is the smart choice. The PageLink product line offers schools with the latest and most innovative way to incorporate synchronized voice and time solutions throughout any sized facility. This can provide schools with the benefits of improved safety, increased productivity and reduced maintenance costs. The PageLink system is a reliable and cost effective alternative solution to old and traditional wired communication systems.

The PageLink series can provide schools with the following solutions:

Wireless Two-Way Communication

The PageLink product line provides schools with the ability to incorporate two-way intercom communication throughout the facility. As a wireless solution, this intercom system offers easy station installation, relocation or expansion, without the need to run costly wires throughout the school.

Emergency Response System

The PageLink wireless system offers school staff members an immediate way to notify the main office during emergency situations. By using a personal wireless 'panic' button, a staff member can instantly initiate a Lockdown or Evacuation alert to notify the main office and security staff members.

Wireless Bell Notification

The Visiplex wireless bell system offers an easy way to upgrade or replace an existing school bell system. This system uses wireless speakers and a bell controller to create a powerful school break bell system with programmable schedules and various alert tones.

Wireless Overhead Paging

Visiplex wireless public-address systems provide schools with an easy way to incorporate a powerful overhead voice messaging system for daily and emergency announcements. An existing school PA system can be replaced or expanded by adding indoor/outdoor wireless speakers.

Wireless Emergency Notification

Schools have a great need to communicate with students and staff in the event of an emergency. Through instant, well-directed live or pre-recorded voice messages, the PageLink wireless system notifies and instructs those in the vicinity how to react to a variety of emergency situations.

Wireless Time Synchronization

Visiplex offers schools the ability to incorporate accurate synchronized time for all clocks and computers throughout the facility. Visiplex offers wireless analog clocks, LED digital clocks and LED alphanumeric displays in a variety of sizes and styles to match all school needs.

One System. No Wires. Easy Installation.

Wireless System Solution:

PageLink offers a turn-key system providing two-way intercom connectivity, school-wide Public Address messaging, break bell alerts, clock time synchronization, emergency mass notification and instant personnel paging solutions.

When compared with a traditional wired system, the main advantages of the PageLink system are the cost and ease of installation, expansion and relocation.

The primary cost difference between a wireless system and a hard-wired system relates to the costly wiring at the facility and future related wiring problems. Another cost saving factor with a wireless system is that there is no need for expensive rewiring service calls when a system expansion or unit relocation is needed, as it can easily be done by the end-user.

Easy to Install:

One of the most important features of the PageLink system is the ease of installation, expansion and relocation. Most parts of the system are designed to be installed without the need of professional installers.

All PageLink remote devices, such as wireless speakers, LED alphanumeric displays, bells, speakers, digital clocks and strobe lights simply need to be connected to an AC outlet to operate effectively.

In most small to average sized schools, the PageLink encoder, transmitter and antenna can all be placed in a main office or communication room. If the system is designed to cover a very large school, it is recommended to use a professional installer to install the main system transmitter and antenna. If you need or choose to install the system by a professional, VisiPlex can offer professional installation services.

Wireless Two-Way Intercom System

- Wireless two-way intercoms throughout the facility
- Can be used for school-wide instant voice notification
- Cost effective solution - no wires to run!
- Easy intercom station installation and relocation

Visiplex's PageLink system offers schools the ability to incorporate two-way intercom communication throughout the facility, providing the benefits of improved communication and safety in addition to reduced maintenance costs. This unique wireless school intercom system can be installed as part of the school public address system or as a stand-alone solution. The system can be designed with multiple zones and provide the ability to communicate with each specific intercom station individually. As a wireless solution, this intercom system offers easy installation and expansion without the need to run any wires.

Wireless Bell System

- Wireless bell and clock time synchronization
- Programmable weekly or calendar bell schedule
- Utilizes wireless PA speakers for bell tones and alerts
- Easy and cost-effective installation and expansion

Visiplex wireless bell systems offer an easy way to upgrade or replace an existing school bell system, using wireless speakers and a bell controller to create a powerful school break bell system with programmable schedules and custom alert tones. Using the same time synchronization signal that is used for the school clock system, the school bell system will initiate bell tones in full synchronization with all school clocks. The Visiplex wireless bell system offers four, fully programmable, seven-day schedules of up to 48 bell tones per day, or a 365-day schedule design with up to 42 bell tones per day. Tone schedules can easily be programmed from a PC or over a local network.

Wireless Public Address System

- Wireless voice messaging throughout the facility
- Wide selection of indoor/outdoor speakers and horns
- PA speakers can also be used for break bell alerts
- Easy system installation and expansion

Visiplex wireless public address systems provide schools with an easy way to incorporate a powerful messaging system for daily and emergency announcements throughout the facility. Schools that need to replace or expand their existing Public Address system can easily do so by adding wireless speakers that can also be used for break bell alerts. The Visiplex school PA system can function with multiple indoor/outdoor zones and provides the ability to communicate with each zone or specific classroom PA speaker. As a wireless solution, this PA system offers easy installation and cost effective integration without the need to run any wires throughout the facility.

Emergency Response System

- Instant classroom Lockdown/Evacuation emergency alerts
- Instant alerts to the main office and security staff members
- Enables a fast response to emergency situations
- Easy system installation and expansion

The PageLink system offers the ideal wireless emergency response system to provide school staff members the ability to initiate instant Lockdown or Evacuation alerts during emergency situations. Using a compact personal Panic Button device, a school-wide alert can be sent within seconds to notify the main office and security staff members by activating pre-programmed visual and voice messages with detailed instructions.

Emergency Notification System

- Wireless school-wide instant audio-visual notification
- Wide selection of PA speakers, LED displays & strobes
- Can be used for daily PA announcements and bell alerts
- Easy system installation and expansion

The Visiplex AlertWave is a turnkey wireless emergency notification system that provides instant warnings and instructions to students, visitors and personnel during emergency situations in order to reduce confusion, injuries and casualties. In the event of a school emergency, the AlertWave system will instantly issue audible and visual alerts followed by live voice or pre-recorded messages with detailed instructions using simple and clear language on how to respond. The AlertWave system offers many upgrades and options such as wireless emergency call boxes, remote device supervision, integrated power backup, secured communication modes, solar power packages, and more.

Wireless Time Synchronization System

- Wireless time synchronization throughout the facility
- Wide selection of Analog and Digital Clocks
- Accurate time source from a GPS receiver or PC
- Easy system installation and expansion

The PageLink system provides schools with the ability to incorporate accurate synchronized time for clocks and computers throughout the facility. This provides the benefits of improved productivity and reduced maintenance costs. Visiplex offers analog clocks, LED digital clocks and LED alphanumeric displays in a variety of styles and sizes to match all school needs. Using a GPS receiver or a PC as a time reference, the PageLink system can broadcast a time synchronization RF signal to cover any single or multi-building school area. The Visiplex wireless time synchronization system is easy to install and allows clocks to be added or relocated without the need to run any wires.

PAGING CONTROLLERS

VisiPlex offers a variety of wireless paging controllers that can communicate, control and synchronize thousands of wireless receivers such as Public Address speakers, LED displays, intercom stations, two-way radios, pagers, synchronized clocks, strobe lights, sirens and other wirelessly controlled devices.

WIRELESS PA SPEAKERS

VisiPlex offers a variety of cost effective wireless public address speakers, controllers and amplifiers to meet the requirements of most PA messaging systems. VisiPlex speakers are designed to be used in applications such as in-house paging, bell alerts, emergency notification, public safety and more.

WIRELESS LED DISPLAYS

VisiPlex offers a selection of alphanumeric LED displays to match any facility's needs. The wireless LED displays can also function as digital clocks while providing alphanumeric text messaging when needed. The wireless digital displays come with a variety of LED sizes, colors and formats to provide easy viewing and accommodate a wide variety of application environments.

WIRELESS ANALOG CLOCKS

VisiPlex offers a large selection of wireless synchronized analog clocks. These clock models come with durable frames and lenses, easy viewing faces and will provide years of maintenance-free battery life. All analog clocks can be ordered with an optional custom logo and frame colors.

WIRELESS DIGITAL CLOCKS

VisiPlex offers a wide variety of wireless synchronized digital clocks to match any facility's needs. The wireless LED clocks come in a variety of sizes, colors and formats for easy time viewing and to accommodate any type of application environment.

WIRELESS INTERCOM STATIONS

VisiPlex offers unique intercom stations for wireless two-way

About VisiPlex

VisiPlex, Inc. is a U.S. based company founded in 1989. During the last 25 years, we have become recognized worldwide as a leading designer and manufacturer of wireless voice & data paging systems, wireless emergency warning systems, wireless Public Address Systems, wireless synchronized clock systems, wireless Nurse Call systems and many other application-specific wireless solutions.

Over 20,000 businesses and organizations rely on VisiPlex wireless products to improve operating efficiencies, emergency response times, and the ability to save costs. VisiPlex end-users are campuses & universities, government facilities, military bases, hospitals & medical centers, cities & municipalities, schools, shopping malls, industrial plants, commercial facilities, assisted living centers, and more.

Our company success is attributed to the ability of providing high-quality, innovative wireless solutions, backed by on-going engineering, sales, and customer service.

voice communications. These intercom stations are simple to operate and are designed to be used as a voice link between a classroom and main office. These wireless stations can operate in full duplex 'hands free' mode or half duplex user-controlled mode.

WIRELESS RECEIVERS

VisiPlex paging systems offer a wide selection of wirelessly

controlled devices and paging receivers to provide remote activation and data monitoring for a variety of wireless applications. The wirelessly controlled devices can control sirens, strobe lights, electrical locks, dome lights and many other electrical devices.

PAGING ACCESSORIES

VisiPlex offers a selection of add-ons to complete its wireless paging systems with accessories such as compact radio transmitters, pendant transmitters, pagers, remotely activated switches, dry-contact alarm input expansion units, radio antennas, antenna mounting kits and more.
