Benedictine University selects Visiplex, Inc. AlertWave system. *Mass Notification and Early Warning System*

Vernon Hills, Ill., January, 2008 — Visiplex, Inc. a premier leader in wireless emergency mass notification systems, and Benedictine University, Lisle, IL, announced the successful deployment of a campus mass notification and emergency warning system to improve campus security and public safety.

“We have been looking for a system that will fit our growing campus needs, be easy to install, expandable, and backed by a company that has been in the wireless market for years,” said Michael Salatino, chief of police at Benedictine University. “The AlertWave system is the only mass notification system that is fully wireless and easy to expand. It provides campus-wide ‘live’ and pre-recorded voice messaging, visual alerts, utilizing LED displays and strobe lights, in addition to mass e-mail and phone messaging capabilities.”

The Visiplex, Inc. AlertWave mass notification system allows the university to have complete control without having to rely on outside third parties, who utilize phone and internet communication lines that have been prone to fail during real emergency situations or take minutes to hours to deliver a partial emergency alert.

“Initiating a campus-wide alert within seconds, the state-of-the-art AlertWave system will tell students what happened and how to react,” said Michael Lauzon, Sales Manager of Visiplex, Inc. “AlertWave is the only wireless emergency mass notification system that can provide unique features such as remote device supervision, secure communications, live voice announcements, integration with other in-house alert systems and a networked PC based control center,” added Lauzon.

The AlertWave system uses simple voice instructions that can be customized for each building and zone. The emergency alert will target everyone on campus, indoors and outdoors – not only students with phones or e-mail access.

“Visiplex, being in the wireless paging business for more than 15 years, and with thousands of installations, gave us great confidence that we are working with a proven company with credibility and staying power,” added Salatino.
