FOR IMMEDIATE RELEASE

Columbia College of Chicago selects AlertWave system. *Mass Notification and Emergency Warning System*

Vernon Hills, Ill., May, 2008 — VisiPlex, Inc. a premier leader in wireless emergency mass notification systems, and Columbia College, Chicago, IL, announced the successful induction of a campus-wide mass notification and emergency warning system to enhance campus security and public safety.

The AlertWave system initiates a campus-wide alert within seconds, informing students and the public of the situation and emitting how to react with simple voice instructions that can be customized for each building and zone.

“We were looking for a solution that met best practices and current federal guidelines for emergency alert systems. After comparing available systems, we chose AlertWave because we found it to be the best solution for our growing campus,” explained Markland G. Lloyd, associate vice president of Columbia’s Marketing & Communication Department.

“AlertWave is the only wireless emergency mass notification system that can provide unique features such as remote device supervision, secure communications, live voice announcements, integration with other in-house alert systems and a networked PC based control center,” added Lauzon.

Columbia College has more than 17 multi-story buildings on its immensely extended campus in downtown Chicago. Columbia is planning to use its AlertWave system during any emergencies that may occur.

The VisiPlex, Inc. AlertWave mass notification system allows the college to have complete control without having to rely on outside third parties, who utilize phone and internet communication lines that have been prone to fail during real emergency situations or take minutes to hours to deliver a partial emergency alert.
