### **Texas State Technical College selects VisiPlex, Inc. AlertWave system.** *Mass Notification and Early Warning System*

**Vernon Hills, Ill., June 6<sup>th</sup>, 2008** — VisiPlex, Inc. a premier leader in wireless emergency mass notification systems, and Texas State Technical College, Marshall, TX, announced the successful installation of the VNS2500 system for the use as a wireless paging system in their dormitories to improve security and communication. This unit is flexible and can be expanded to its' full capabilities as an emergency mass notification system.

The VisiPlex AlertWave wireless mass notification system, allows a university to have complete control without having to rely on outside third parties, who utilize phone and internet communication lines that have been prone to fail during real emergency situations or take minutes to hours to deliver a partial emergency alert.

“For more than 15 years in the paging business, and have done thousands of installations, we were confident VisiPlex, was a proven company with credibility and staying power,” added Mario Cantu, instructor at TSTC.

“The state-of-the-art AlertWave system will tell students what happened and how to proceed,” said Andy Watts, Sales Manager of VisiPlex, Inc. “AlertWave is the only wireless emergency mass notification system that can provide unique features such as remote device supervision, secure communications, live voice announcements, integration with other in-house alert systems and a networked PC based control center,” added Watts.

The emergency alert will target everyone on campus, indoors and outdoors – not only students with phones or e-mail access, but visitors as well. The alert can be customized by building, by zone, or a full scale campus-wide warning.
