FOR IMMEDIATE RELEASE

California State University- Monterey Bay installs Visiplex, Inc. AlertWave System

An outdoor wireless emergency notification/alert system

Vernon Hills, Ill., July 2nd, 2008 — Visiplex, Inc. a premier leader in wireless emergency mass notification systems, and California State University- Monterey Bay, Seaside, CA, announced the successful implementation of an outdoor wireless emergency notification/alert system across campus. The outdoor system has been integrated with the campus communications plan as another way to provide information in the event of natural disasters, campus violence or other emergencies. The system has been tested, and is fully operational.

So far, 17 speakers have been installed throughout the main campus; 10 more will be installed over the next two weeks. Installation of a second system in the East Campus housing areas will begin prior to the start of classes in the fall. Visiplex, Inc., has installed similar systems at Stanford University and UCLA, among other schools. that includes campus-wide e-mail, instant messaging, phone messages, website updates and text messages.

The AlertWave System will be operated from the police department, where they can broadcast live messages or pre-recorded ones. The speakers are mounted on buildings and are unobtrusive. "They're strategically placed every couple of hundred feet," said Police Chief Fred Hardee. "And if you're not looking for them, you won't notice them."

"AlertWave is the only wireless emergency mass notification system that can provide unique features such as remote device supervision, secure communications, live voice announcements, integration with other in-house alert systems and a networked PC based control center," added Lauzon.
