

## Pendant to Speaker System

### Key Features:

- **Activate Pre-Recorded Messages from Speakers**
- **Easy Installation**
- **Use a 4-Button Pendant to Activate 4 Messages**
- **Supports Unlimited Speakers**
- **Low-Cost System**

**The Visiplex Pendant to Speaker System** is a cost-efficient solution to install an audio notification system at any facility.

When activated, the pendant's signal will be received by the nearby VNS2200 controllers. The VNS2200 will then play a pre-recorded message from the attached speakers. The system supports an unlimited amount of speakers.

The VNS2200 controller connects directly to an electrical outlet from its Power port, then directly to the speakers from its Speaker port, allowing for a fast and easy installation process.

If a 4-button pendant is used, each button can activate a different pre-recorded message from the speakers.
