

VNS2264 - Ambient Noise Sensor

The optional VNS2264 Ambient Noise Sensor is designed to give the VNS2200 wireless audio/visual controller the unique ability to automatically adjust the level of its voice messages and alerts to match the surrounding environment. For example, the ambient noise sensor would lower the volume of messages and alerts in an empty room, but would raise the volume when the room is crowded and noisy.

VNS2200

Key Features:

- Dynamic Alert Volume Level Adjustment
- Optimal for Environments with Constantly Changing Ambient Noise Levels
