The VS1504 Wireless Alphanumeric LED Display is designed with easy time and message viewing to accommodate a wide variety of application environments.

The VS1504 supports 6 activation codes (ID's) for individual activation or membership activation in 5 separate groups. Creating groups provides the ability to activate multiple devices using a single transmission from a main wireless paging controller, such as the VS4800 or VNS5100.

The VS1504 can be set to default time display mode. In this mode, the VS1504 switches to alphanumeric message mode only when a text message is received. When the text message lifetime elapses, the VS1504 reverts back to time display mode.

Key Features:

- Two-Line Alphanumeric Display Format
- Text Scrolling
- Alternate Time Display
- Wall or Ceiling Mount
- Supports Multiple Display Effects
